

Learn your first ASL signs with *your own two hands*.

A seated, hands-only Meta Quest app that teaches first ASL vocabulary to families in five-minute sessions. Sprout shows each sign face to face, glowing guide hands sit on your hands, the app checks each finger, and every sign grows your garden.

Productivity

New Experience

WebXR · IWSDK 1.0

THE PROBLEM

Most deaf babies are born to parents who don't sign yet.

Video lessons make parents flip every movement in their heads, and nothing checks their hands. Time and cost are the top barriers.

90%+

of deaf children have hearing parents

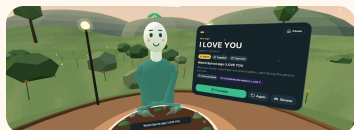

1 in 4

families regularly sign at home

24.3%

sideways-move errors by non-signers copying face to face

FOUR STEPS, ABOUT A MINUTE A SIGN

1 · Watch

Sprout shows the sign, mirrored for easy copying

2 · Together

Put your hands inside the glowing hands

3 · Your turn

From memory, with specific feedback

4 · Celebrate

A new plant sprouts in your garden

BUILT FOR THE HEADSET

- Hands only end to end: poke, pinch or look at every button (about 2.8–4.5 cm tall), no controller.
- Seated within two feet; recenters on your head; clean pause and resume.
- A link, not an install: Meta Immersive Web SDK 1.0 + WebXR Hand Input.
- 87 signs as linguistic data (handshape, location, palm, movement); one definition drives Sprout, guide, instructions and checker.
- Accessible: captions, optional voice, left-handed mode, limited finger range, one-hand option, high contrast, calm motion.

TESTED WITH A SIMULATED LEARNER (SYNTHETIC HANDS, NOT YET REAL-USER DATA)

All 87 signs, right- and left-handed, performed correctly	100% accepted
Wrong shape, place or movement	0 false accepts
With 8° joint jitter and 4 mm noise	98.5% accepted

WHAT MAKES IT DIFFERENT

Guide hands, exactly where yours are.

- First-person guide hands** remove the mental left-right flip; they fade as you improve.
- Checked in order:** handshape, then place, then movement, then the final handshape, with plain-word tips per finger.
- A garden that is your progress:** spaced repetition, plants droop when a review is due.
- Sprout, the practice coach,** plans sessions around real moments using only signs Signsprout can check.

BUSINESS

Planned: **Free** core units · **Family** \$7.99/mo or \$59/yr (up to 4 members) · **Family Pass** free for families of deaf children under 3, funded through partner programs · **Programs** from \$39 per family per year.

Beachhead: ~5,600 new US hearing families of deaf babies each year. Expansion: ASL is the #3 language in US colleges; Lingvano reached 2.5M learners with 2D video. Costs: static hosting, a managed database, on-device tracking: under \$0.05 per family per month (estimate).

ROADMAP

Dec 2026 open web beta, real-signer testing, paid Deaf reviewers, pilot programs · Q1 2027 Meta VR Store · facial-grammar lessons, two-person practice · BSL and ISL with local Deaf partners.

Sources: NIDCD 2024; Lieberman et al. 2024 (GRI 2013–14); Shield & Meier 2018; CDC EHDI 2022; MLA 2021; eSchool News 2024. Simulated-learner tests (synthetic hands, not real-user data): packages/signkit; real-signer testing is next.

Try it: open signsprout.web.app/app in the Meta Quest browser. Desktop visitors can watch the demo.
